

Computed tomography probably with contrast agent

Do you have any health problems ? Do you have any pain or other feelings of discomfort?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what and since when?
Your height? <input type="text"/> cm Your bodyweight? <input type="text"/> kg	
Previous X-Ray or computed tomography examinations?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what, where and when?
Previous nuclear medicine examinations (e.g. bone scintigraphy, thyroid scintigraphy or kidney scintigraphy?)	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what, where and when?
Previous cancer or tumor radiotherapy?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what, where and when?
Do you have or did you have infectious diseases like HIV/AIDS, hepatitis or tuberculosis?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what and when?
Are you allergic to contrast media or things like latex, plasters, disinfectant, narcotics?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what?
Do you suffer from asthma?	Yes: <input type="checkbox"/> No: <input type="checkbox"/>
Do you take painkillers (e.g. Diclofenac, Paracetamol)?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes which ones?
Did you already have any surgery in the region which is going to be examined?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what and when?
Any kidney diseases or renal impairment are known to you?	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes what?
Did you have kidney transplantation?	Yes: <input type="checkbox"/> No: <input type="checkbox"/>
Do you suffer from hyperthyroidism or any other thyroid disease? (e.g. Hashimoto, Basedow)	Yes: <input type="checkbox"/> No: <input type="checkbox"/> If yes which one?
Are you diabetic?	Yes <input type="checkbox"/> No: <input type="checkbox"/>
Name and address of your family doctor :	
Additional question for women: Are you pregnant or could you be pregnant ?	Yes <input type="checkbox"/> No: <input type="checkbox"/>

■ Declaration of consent

I agree with the implementation of the computed tomography (CT):

Yes:

No:

I consent to an injection of a contrast agent should it be necessary:

Yes:

No:

I agree with the sending of my findings reports to my treating doctor and my family doctor:

Yes:

No:

You can revoke the declaration of will at any time by written notice.

Patient information: Computed tomography probably with contrast agent

Your Name:

Your treating doctor has recommended for you a computed tomography (CT). The examination will lead with a high probability to a detailed diagnosis of your disease or a suspected disease can be excluded.

Ersteller: Hr. Engel, Freigeb.: QMB, Rev.01/14.02.2020

👉 Please keep in mind that we are radiologists and we don't give any recommendations for treatments. Your treating doctor will inform you about useful therapies.

■ What is a computed tomography (CT)?

The CT is an imaging method using x-rays. You are lying on the CT table and you are moved into the machine through a short and open ring for a few seconds. The examination is possible even with claustrophobia. Please stay calm and relaxed. Depending on the examination you will be asked to inhale deeply and to hold your breath. The examination in total takes only a few minutes.

■ Are there any complications during the computed tomography possible?

Only in exceptional cases.

The radiation exposure of our modern CT is low but it's higher than normal (conventional) X-Ray. The results of this examination are much more detailed. We are radiation specialists and you can be sure that we will check the need for your examination. If you need further information about the radiation please ask us before the examination.

■ Are there alternative investigation methods?

Normal (conventional) X-Ray, Magnetic resonance imaging, sonography or nuclear medicine examinations. We and your treating doctor have chosen the most suitable examination for you.

■ What complications can be caused by the contrast agent?

The risk for side effects of modern contrast agents is very low. Because of intravenous injection, there is the very rare possibility of bruises, infections, or inflammations. Paravasation means that the contrast agent is not floating into a vein but into the surrounding tissue. In this case, one should not expect serious complications.

Because of the contrast agent (and possibly additional drugs), there is the possibility of intolerance allergic reactions. These cases are very rare and in most cases,

there are only mild reactions like rash, itching, or nausea. Severe allergic reactions up to life-threatening so-called anaphylactic shock with permanent organ damage are extremely rare. By known iodine allergy, the application of contrast agent is contraindicated. For examinations of the abdomen, there is the possibility of an additional drinking contrast agent, it contains less than 0.2 ml of alcohol (approx. 0.52% by volume). Talk to us before taking it if you are not allowed to consume any alcohol (e.g. if you have liver disease, alcohol addiction, epilepsy, or if you are breastfeeding). In the case of certain kidney diseases or high-grade insufficient kidneys, there is the possibility of renal failure after the application of a contrast agent. In the case of high-grade insufficient kidneys, no contrast agent will be applied. The contrast agent contains iodine and there is the possibility of development of hyperthyroidism. Symptoms are an unusually fast heart rate, nervousness, and heavy sweating. If you realize these symptoms please contact your doctor. You should drink a lot in the next 24 hours after the examination (water, tea).

■ Additional information for women

Please inform us immediately if you are pregnant or if there is a possibility of pregnancy. CT should not be performed during pregnancy. The radiation can harm the unborn child. The interruption of breastfeeding after application of contrast agent is not necessary.

■ Rejection of examination or application of contrast agent

If you reject the CT examination or the application of a contrast agent you risk disadvantages to your health. Therapy/surgery is possibly delayed or cannot be done at all.

■ Data protection and confidentiality

According to medical professional regulations and laws (SGB V), we are obliged to report the result of the examination to your treating doctor. All external service providers having contact with personal data are subject to the duty of silence.

👉 I have read and understood the patient information.
